- The Human Behaviour Change Project
- The Health Psychology Research Team
- The Centre for Behaviour Change

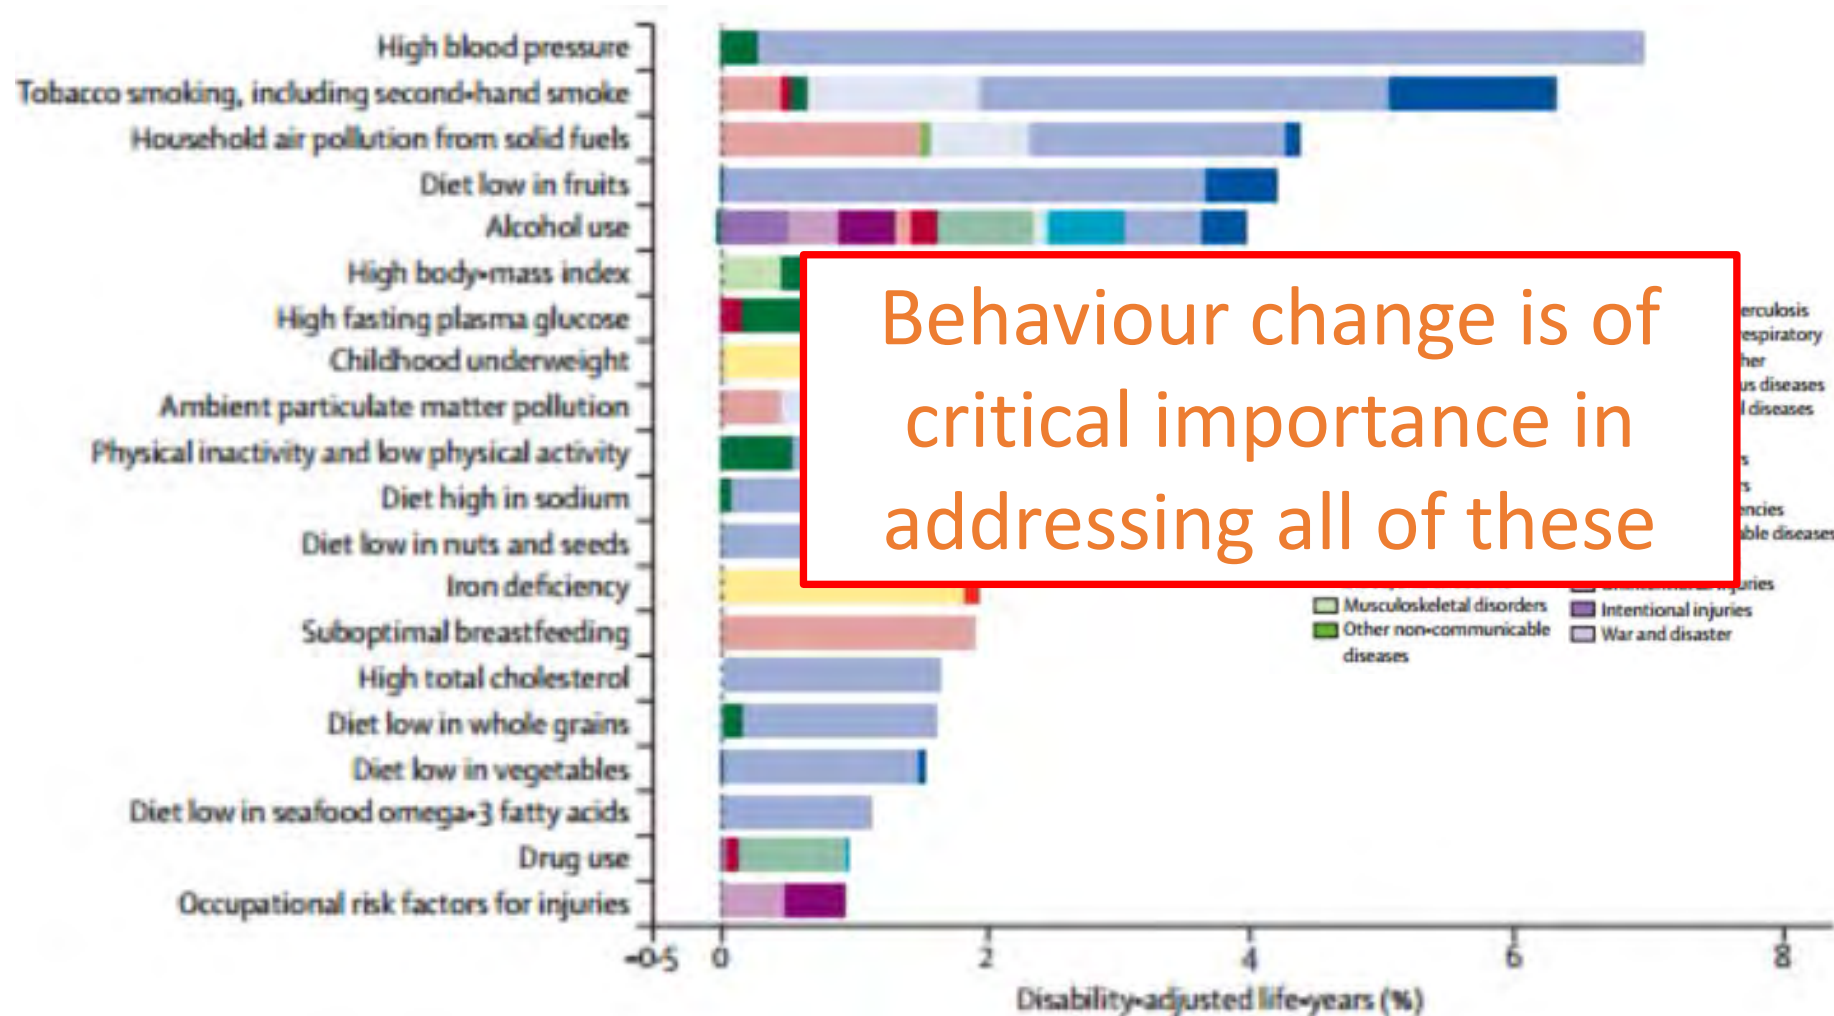

Human Behaviour-  
Change Project

# This talk

1. Challenges to increasing the effectiveness of behavioural interventions
  - Reporting interventions
  - Synthesising evidence to generate new insights about behaviour change
2. The Human Behaviour-Change Project

## Major causes of disability and premature death globally

# Interventions to change behaviour

- We have a rich source of methods for intervention design
- Considerable investment in individuals, communities
  - Trials: estimated 10,000 interventions per day
- Most have modest and variable effects
  - *e.g. Cochrane database, National Institute for Health & Care Excellence (NICE)*

*How can we improve this situation?*

# Interventions to change behaviour

Human Behaviour-  
Change Project

- If we are to improve interventions, need to
  1. understand reasons for their variation
  2. reduce waste in research (*Lancet series, 2014*)
- This requires
  1. Better **reporting** of all aspects of interventions and their contexts
  2. The ability to
    1. **organise** and **synthesise** large amounts of complex evidence **at scale** and **rapidly**
    2. Make inferences from that evidence to generate new **understanding**

## Research: increasing value, reducing waste 5

### Reducing waste from incomplete or unusable reports of biomedical research

*Paul Glasziou, Douglas G Altman, Patrick Bossuyt, Isabelle Boutron, Mike Clarke, Steven Julious, Susan Michie, David Moher, Elizabeth Wager*

- 40–89% interventions **non-replicable**
- Recommendations include
  - **High quality** and **complete** reporting demanded by journals, authors and peer reviewers
    - use **reporting guidelines**

**Glasziou et al, *Lancet*, 2014**

# Reporting behavioural interventions

- vague, partial and/or use terminology inconsistently

Title of journal article	Description of “behavioural counseling”
The impact of <b>behavioral counseling</b> on stage of change fat intake, physical activity & cigarette smoking in adults at increased risk of coronary heart disease	“ <b>educating</b> patients about the benefits of lifestyle change, encouraging them, and suggesting what changes could be made” (Steptoe et al. <i>AJPH</i> 2001)
Effects of internet <b>behavioral counseling</b> on weight loss in adults at risk for Type 2 diabetes	“ <b>feedback</b> on <b>self-monitoring</b> record, <b>reinforcement</b> , recommendations for change, answers to questions, and general support” (Tate et al. <i>JAMA</i> 2003)

# The problem of poor descriptions

Human Behaviour-  
Change Project

- Vague and lacking detail; use of inconsistent and varying terminology
- We need language that is understood by all, with the same terms used for the same things
- Without this, we are limited in our ability to
  - replicate,
  - implement effective interventions,
  - evaluate or
  - improve interventions

# Reporting guidelines/ tools helpful

Human Behaviour-  
Change Project

## Reporting Examples

[Submit Example](#)

If you find an example of good reporting, login here

## Welcome to the CONSORT Statement Website

CONSORT, which stands for Consolidated Reporting of Trials, encompasses various initiatives developed by the CONSORT Group to alleviate the problems associated with the reporting of randomized controlled trials (RCTs).

## News

**Better reporting of interventions: template for intervention description and replication (TIDieR) checklist and guide**

Tammy C Hoffmann *associate professor of clinical epidemiology*<sup>1</sup>, Paul P Glasziou *director and*

**Behaviour change techniques: the evaluation of a taxonomic method and describing behaviour change interventions (a suite of five studies involving consensus methods, randomised controlled trials and analysis of qualitative data)**

*Susan Michie, Caroline E Wood, Marie Johnston, Charles Abraham, Jill J Francis and Wendy Hardeman*

# Reporting intervention content: behaviour change techniques (BCTs)

Human Behaviour-  
Change Project

- “Active ingredients” within an intervention designed to change behaviour
- They are
  - discrete, low-level components of an intervention that on their own have potential to change behaviour
  - observable and replicable

Michie S, Johnston M, Carey R. (2016). Behavior change techniques. In Turner, JR. (Ed.) *Encyclopedia of Behavioral Medicine*. Springer New York.

# BCT Taxonomy v1

Human Behaviour-  
Change Project

- Developed by 400 experts from 12 countries
- Clearly labelled, well defined, distinct, precise; can be used with confidence by a range of disciplines and countries
- Hierarchically organised to improve ease of use
- Applies to an extensive range of behaviour change interventions

Michie et al (2013). *Ann Behav Med.* 46.

# BCT Taxonomy v1: 93 items in 16 groupings

Human Behaviour-  
Change Project

Page	Grouping and BCTs	Page	Grouping and BCTs	Page	Grouping and BCTs
<b>1</b>	<b>1. Goals and planning</b>	<b>8</b>	<b>6. Comparison of behaviour</b>	<b>16</b>	<b>12. Antecedents</b>
	1.1. Goal setting (behavior) 1.2. Problem solving 1.3. Goal setting (outcome) 1.4. Action planning 1.5. Review behavior goal(s) 1.6. Discrepancy between current behavior and goal 1.7. Review outcome goal(s) 1.8. Behavioral contract 1.9. Commitment		6.1. Demonstration of the behavior 6.2. Social comparison 6.3. Information about others' approval		12.1. Restructuring the physical environment 12.2. Restructuring the social environment 12.3. Avoidance/reducing exposure to cues for the behavior 12.4. Distraction 12.5. Adding objects to the environment 12.6. Body changes
		<b>9</b>	<b>7. Associations</b>		
			7.1. Prompts/cues 7.2. Cue signalling reward 7.3. Reduce prompts/cues		

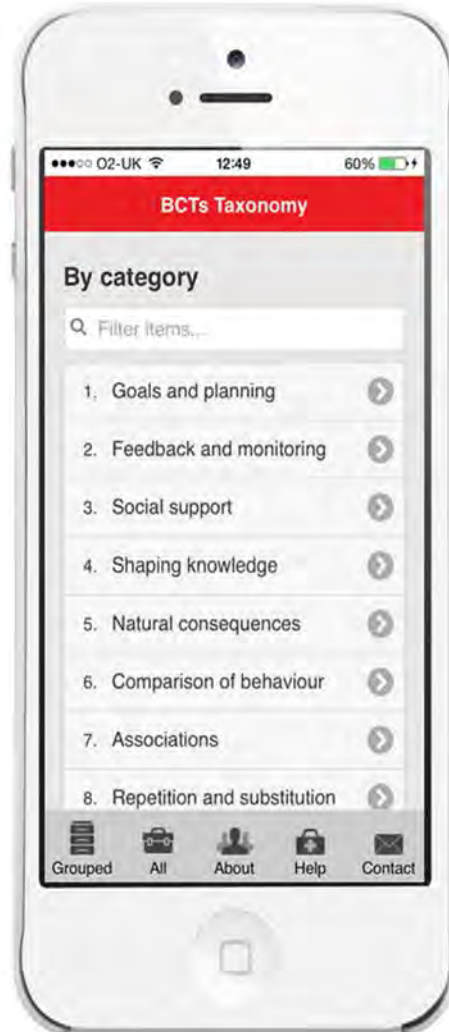

No.	Label	Definition	Examples
<b>1. Goals and planning</b>			
<b>1.1</b>	<b><i>Goal setting (behavior)</i></b>	Set or agree on a goal defined in terms of the behavior to be achieved <i>Note: only code goal-setting if there is sufficient evidence that goal set as part of intervention; if goal unspecified or a behavioral outcome, code <b>1.3, Goal setting (outcome)</b>; if the goal defines a specific context, frequency, duration or intensity for the behavior, <u>also</u> code <b>1.4, Action planning</b></i>	Agree on a daily walking goal (e.g. 3 miles) with the person and reach agreement about the goal  Set the goal of eating 5 pieces of fruit per day as specified in public health guidelines

# The BCT smartphone app

Human Behaviour-  
Change Project

- Search by BCT label, BCT category or alphabetically

or

Find by search term: BCTs

# Guidelines and taxonomies

Human Behaviour-  
Change Project

- Improve reporting and reduce waste in research
- BUT
- on their own do not create new knowledge

# The Human Behaviour-Change Project

# The Human Behaviour-Change Project: harnessing the power of artificial intelligence and machine learning for evidence synthesis and interpretation

Susan Michie<sup>1\*</sup>, James Thomas<sup>2</sup>, Marie Johnston<sup>3</sup>, Pol Mac Aonghusa<sup>4</sup>, John Shawe-Taylor<sup>5</sup>, Michael P. Kelly<sup>6</sup>, Léa A. Deleris<sup>4</sup>, Ailbhe N. Finnerty<sup>1</sup>, Marta M. Marques<sup>1</sup>, Emma Norris<sup>1</sup>, Alison O'Mara-Eves<sup>2</sup> and Robert West<sup>7</sup>

# The primary goal of Behavioural Science

Human Behaviour-  
Change Project

To develop an understanding of human behaviour  
to answer variants of the ‘big question’

***When it comes to behaviour change interventions:***

what works,  
compared with what,  
for what behaviours,  
how well, for how long,  
with whom, in what setting,  
and why?

# Challenges and solutions in evidence synthesis

Human Behaviour-  
Change Project

Challenge	Solution
<b>Research conduct:</b> Diversity of research methods and topics; inconsistency and incompleteness in reporting	Ontology of behaviour change interventions

# Challenges and solutions in evidence synthesis

Human Behaviour-  
Change Project

Challenge	Solution
<b>Research conduct:</b> Diversity of research methods and topics; inconsistency and incompleteness in reporting	Ontology of behaviour change interventions to organise evidence
<b>Resource limitations:</b> Insufficient human resources given the increasing volume of research and need for timely knowledge	Use of automated literature searching and study feature extraction

# Challenges and solutions in evidence synthesis

Human Behaviour-  
Change Project

Challenge	Solution
<p><b>Research conduct:</b> Diversity of research methods and topics; inconsistency and incompleteness in reporting</p>	<p>Ontology of behaviour change interventions to organise evidence</p>
<p><b>Resource limitations:</b> Insufficient human resources given the increasing volume of research and need for timely knowledge</p>	<p>Use of automated literature searching and study feature extraction</p>
<p><b>Research findings:</b> Equivocal or contradictory findings; sparseness of findings relative to the variety of behaviours, interventions, contexts; complexity of interactions between intervention components, contexts and behaviours</p>	<p>Use of machine learning and reasoning algorithms for evidence synthesis and interpretation to build a Knowledge System</p>

# The Human Behaviour-Change Project

Human Behaviour-  
Change Project

Brings together behavioural science, computer science and information science to create and evaluate a **Behaviour Change Intervention (BCI) Knowledge System**:

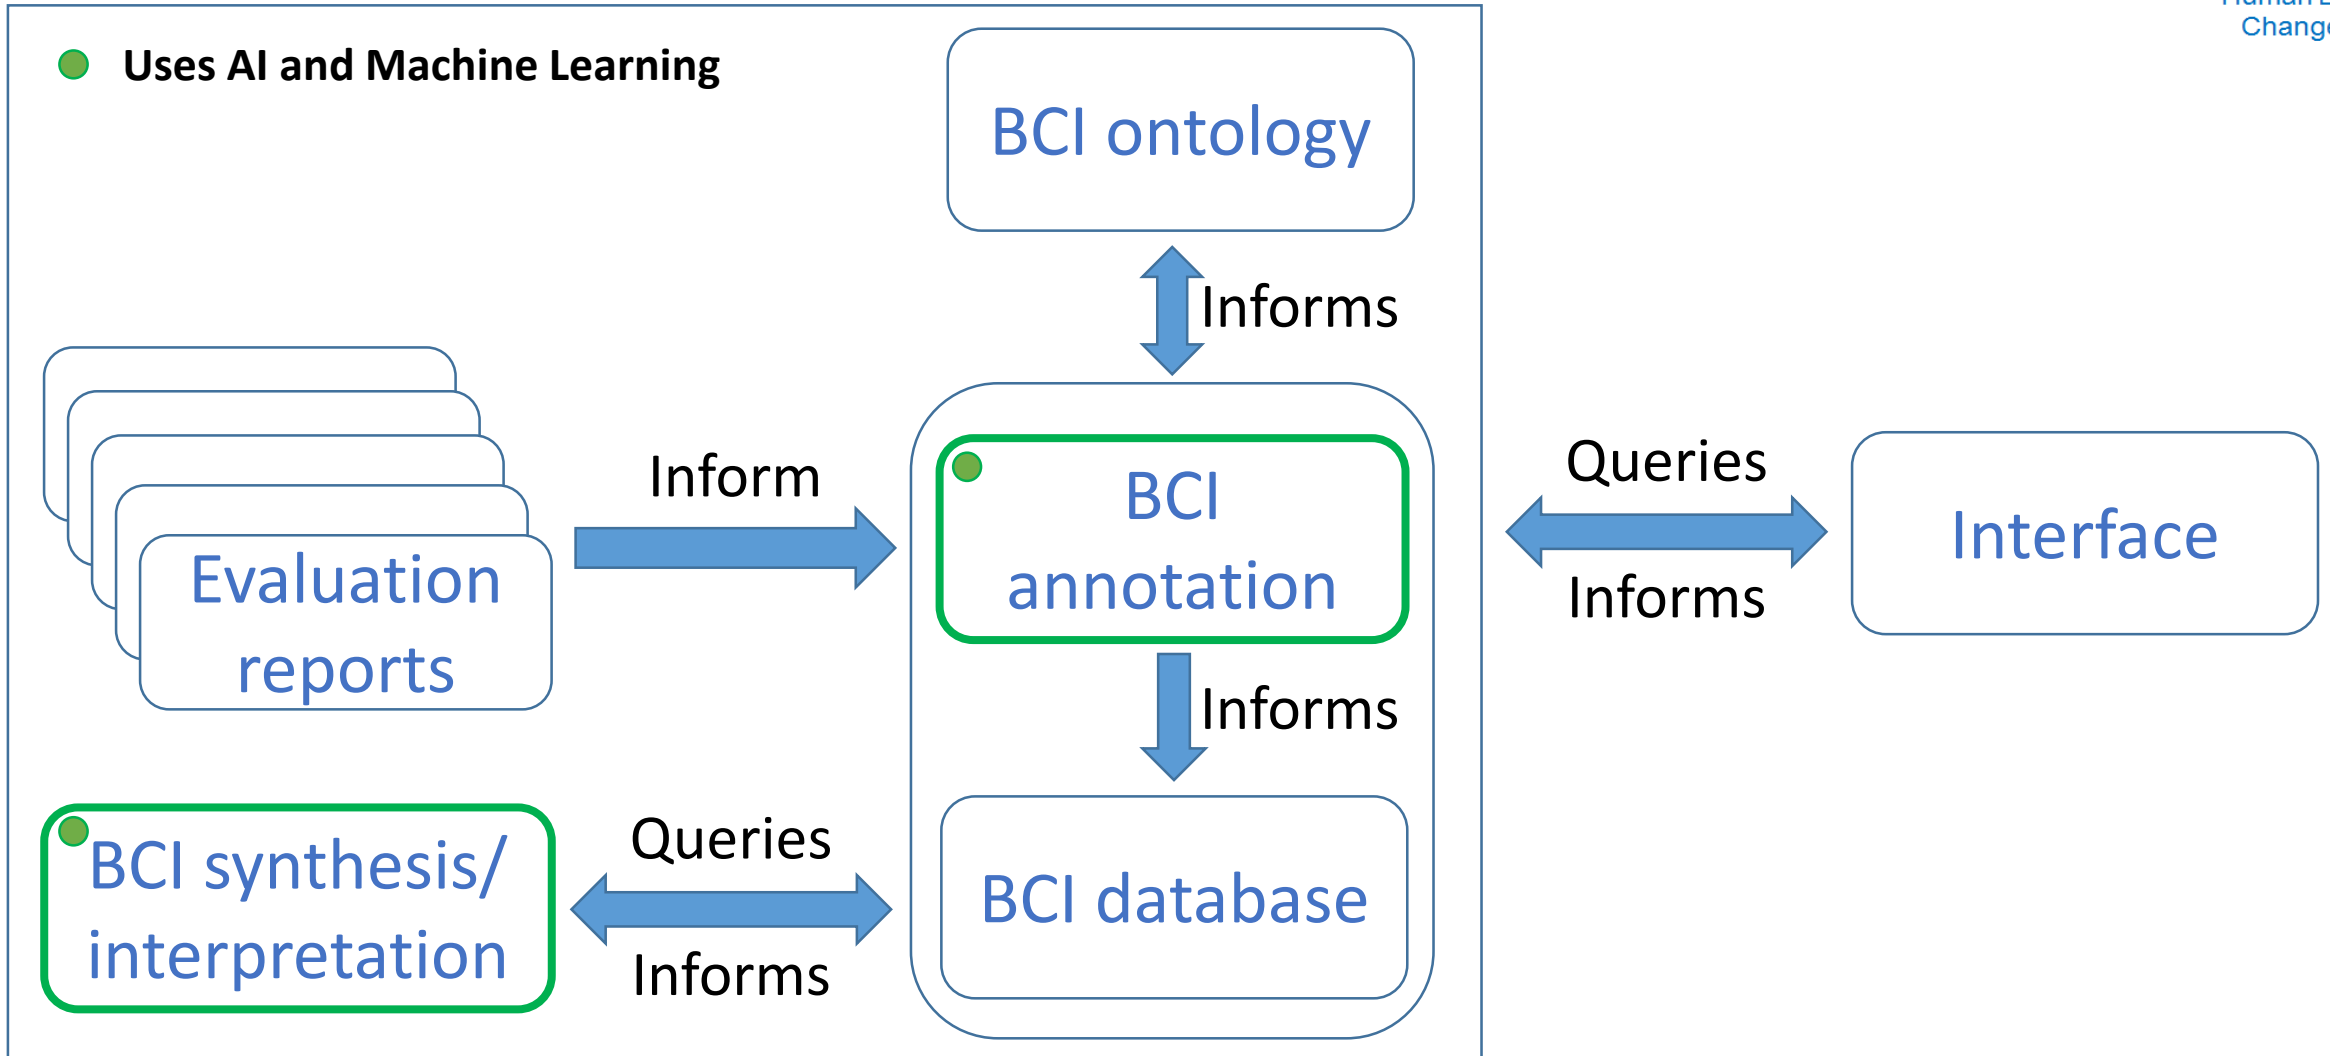

1. An ontology of BCI interventions and evaluation reports
2. A largely automated feature extraction system to read BCI evaluation reports, using Natural Language Processing
3. A BCI database containing information from evaluation reports structured according to the ontology
4. Reasoning and machine learning algorithms to synthesise this information in response to user queries
5. An interface for computers and human users to interact with the system

# The Behaviour Change Intervention (BCI) Knowledge System

Human Behaviour-  
Change Project

# Examples of Human Users

**Behavioural scientist**

E.g. what mechanisms of action are likely to account for the effect of x on y?

**Public health policy-maker**

E.g. what do I need to do to bring about this change in this population?

A thought bubble containing the text 'Detects patterns, makes inferences'.

Detects patterns,  
makes inferences

**The Knowledge System**

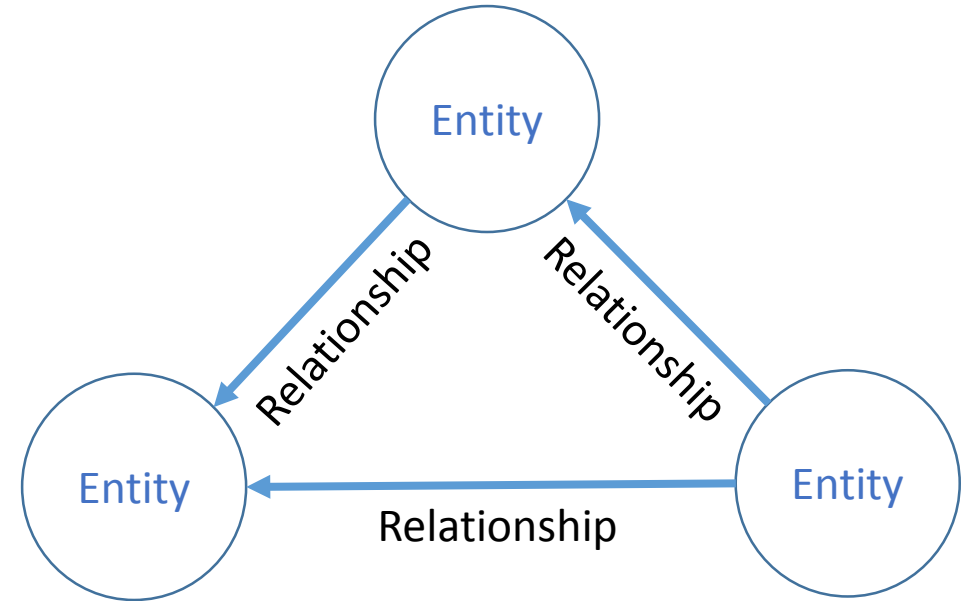

# Ontology

Human Behaviour-  
Change Project

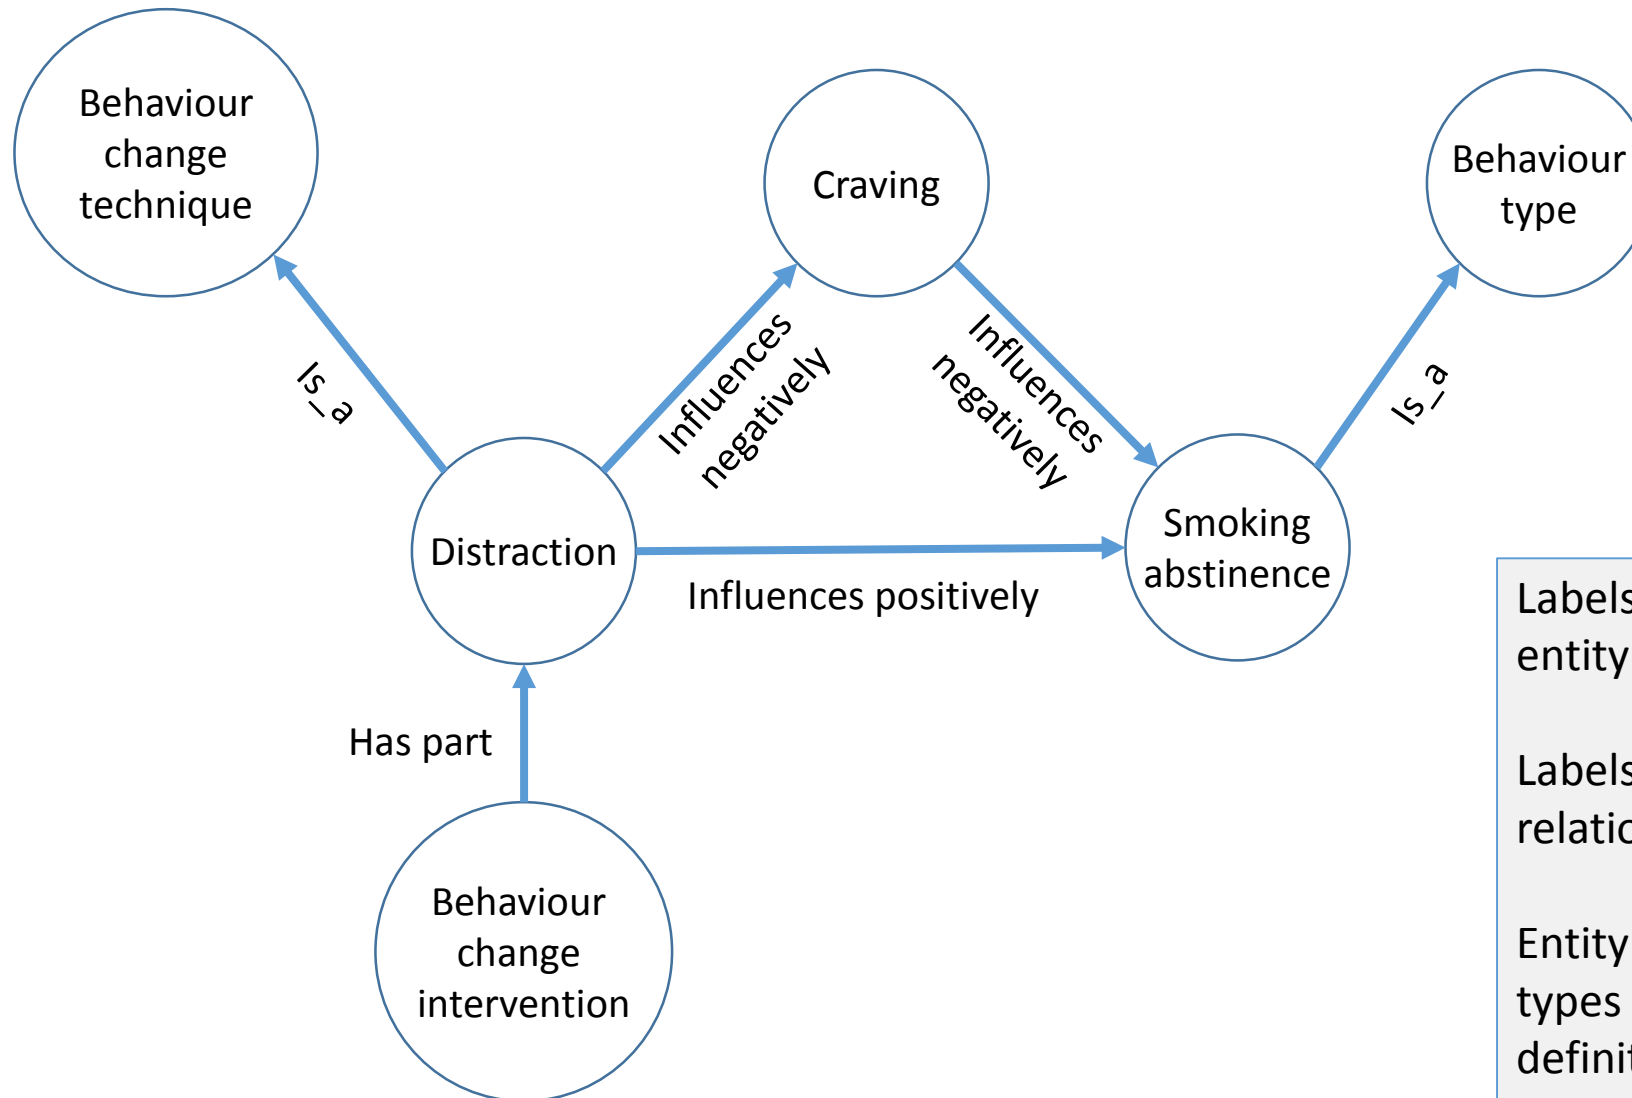

In information science, a system for representing knowledge in the form of:

1. A set of unique identifiers of 'entities'
2. Labels and definitions for these
3. Specification of relationships between them ('is a', 'part of', 'positively influences' ...)

Arp R, Smith B, & Spear AD (2015). Building ontologies with basic formal ontology. Cambridge: MIT Press.

# A mini-ontology

Labels in circles identify entity types

Labels on arrows identify relationship types

Entity types and relationship types require formal definitions

# What ontologies can do

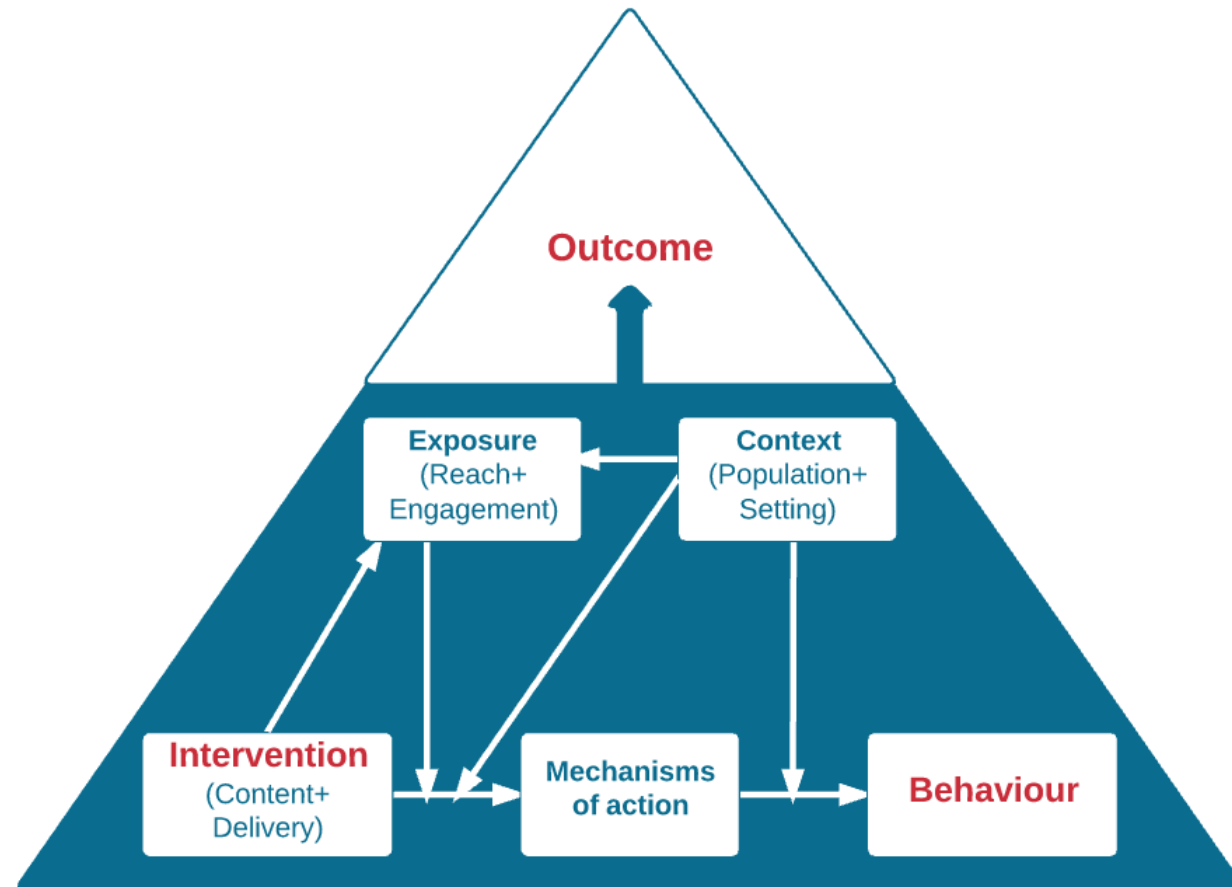

Human Behaviour-  
Change Project

1. Improve clarity of thinking and reporting
2. Generate new ideas and testable hypotheses
3. Identify information gaps and promotes lateral thinking
4. Facilitate interoperability across domains of knowledge and knowledge representations
5. Provide a powerful and intuitive basis for automated querying and reasoning

# Top-level BCI Ontology (BCIO): scenario entities and causal connections

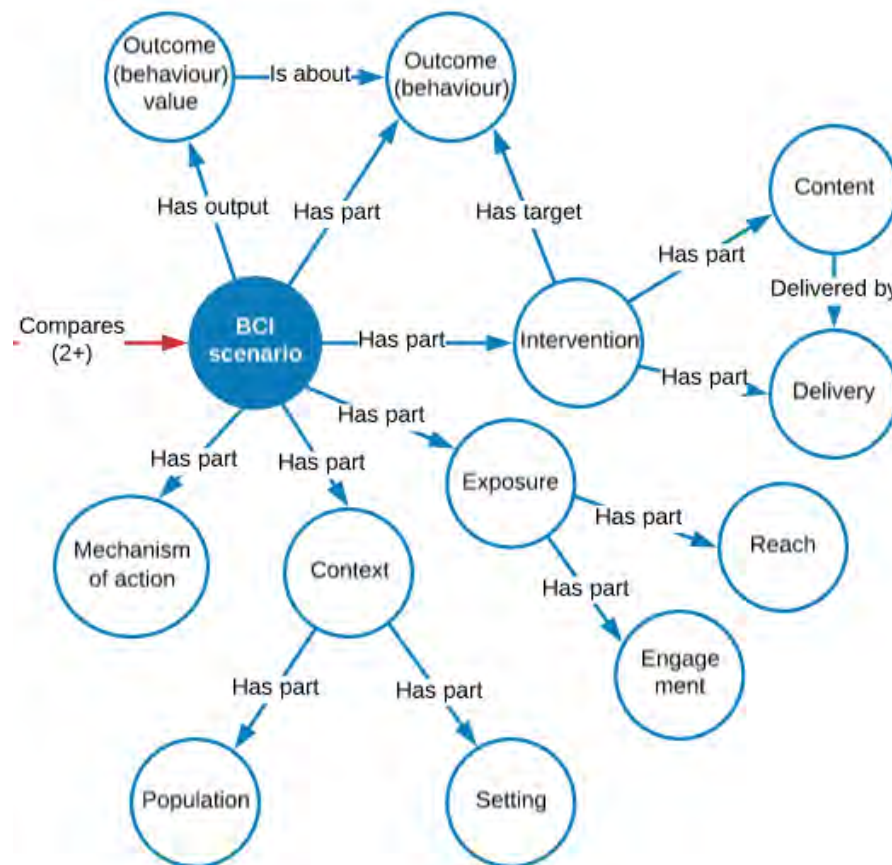

Human Behaviour-  
Change Project

# Top level entities in BCIO

Human Behaviour-  
Change Project

# Specific ontologies being developed for...

Human Behaviour-  
Change Project

1. Behaviour change techniques – BCTTv1
2. Mode of delivery
3. Exposure of intervention
  - Reach and engagement
4. Target behaviour
5. Target population
6. Intervention setting
7. Mechanisms of action
  - Processes by which change occurs

# Desirable qualities

Human Behaviour-  
Change Project

- Clear definitions for all terms i.e. non-overlapping terms without redundancy
- Well-organised, hierarchical structure
- Comprehensive coverage of the area
- Granularity
  - appropriate to how information represented in evaluation reports and to types of question likely to be asked of the Knowledge System

# Domain and scope

Human Behaviour-  
Change Project

- Domain
  - Evaluations of behaviour change interventions
- Scope
  - Initially reports of RCTs of smoking cessation interventions
    - In Cochrane meta-analyses
  - Expanding to RCTs of interventions to change other behaviour types
    - Physical activity, alcohol consumption, dietary behaviours
  - Eventually extend across behaviours and study designs and quality

# Building the Knowledge System

Human Behaviour-  
Change Project

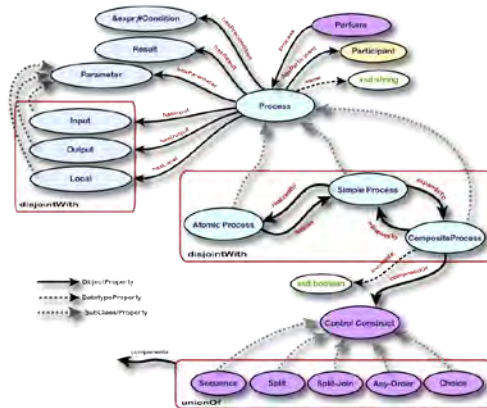

## Machine Learning

Find optimal connections and weights to classify outputs from input data

## Reasoning Algorithms

Using entity relationships and axioms to infer new entity relationships

# Machine Learning and Reasoning Algorithms

Human Behaviour-  
Change Project

- The algorithms will
  - be **trained**, tested and updated using the BCI database and BCI ontology
  - **query** the BCI database for features specified by the user
  - **predict** effect sizes for BCI Ontology entities that are queried, along with a **confidence estimate** i.e. a machine generated judgement of the probability that the prediction is correct
  - **allow explanation** of how they arrived at their conclusions and state important caveats
  - generate **new insights** about behaviour change from patterns of associations

# Interactive Interface

Human Behaviour-  
Change Project

- Develop and evaluate an **online, open-access, interactive interface** to enable widespread use of the knowledge generated
  - provide an easy method for searching the literature using purpose-built syntax for fixed and open parameters, level of abstraction etc.
  - bring user feedback from a wide perspective of views into the database, and into the BCI Ontology
  - use by other computer programs

# Key resource: addressing problem upstream

Human Behaviour-  
Change Project

- Template for reporting BCIs and BCI evaluations using the BCIO
- To enable
  - clear, full reporting
  - data synthesis
  - interoperability i.e. link to other, related ontologies thus extending knowledge

Feature in BCIO	Value
Sample_mean_age_yrs	35.4
Sample_female_%	52.1
Intervention_brand	ACT
Intervention_content_BCTs	1,3,12,34,45,60
Comparator_content_BCTs	1,3,12
Behavioural_target_type	Smoking cessation
Outcome_type	Sustained_abstinence
Setting_clinical_type	GP practice
Etc.	Etc.
